

Supporting DAX Measures / Calculated Fields

Growify Digital – Marketing Analytics Power BI Assignment | Supporting documentation

Purpose

This document lists the supporting DAX logic for the measures and calculated-field style classifications used by the dashboard. The measure names below are based on the measures referenced in the uploaded PBIX report.

1. Core Marketing Measures

Measure	DAX / Logic	Purpose
Total Ad Spent	$\text{Total Ad Spent} = \text{SUM} (\text{Sales}[\text{Ad Spent}])$	Total advertising spend.
Total Sales	$\text{Total Sales} = \text{SUM} (\text{Sales}[\text{Sales}])$	Total sales/revenue.
Total Orders	$\text{Total Orders} = \text{SUM} (\text{Sales}[\text{Orders}])$	Total orders.
Total Conversions	$\text{Total Conversions} = \text{SUM} (\text{Sales}[\text{Conversions}])$	Total conversions.
ROAS	$\text{ROAS} = \text{DIVIDE} ([\text{Total Sales}], [\text{Total Ad Spent}], 0)$	Sales generated per £1 of ad spend.

2. Traffic & Efficiency Measures

Measure	DAX / Logic	Purpose
Total Impressions	$\text{Total Impressions} = \text{SUM} (\text{Sales}[\text{Impressions}])$	Total ad impressions.
Total Clicks	$\text{Total Clicks} = \text{SUM} (\text{Sales}[\text{Clicks}])$	Total ad clicks.
Total CTR	$\text{Total CTR} = \text{DIVIDE} ([\text{Total Clicks}], [\text{Total Impressions}], 0)$	Click-through rate.
Total CPC	$\text{Total CPC} = \text{DIVIDE} ([\text{Total Ad Spent}], [\text{Total Clicks}], 0)$	Cost per click.
Total CPM	$\text{Total CPM} = \text{DIVIDE} ([\text{Total Ad Spent}], [\text{Total Impressions}], 0) * 1000$	Cost per 1,000 impressions.
Total Conversion Rate	$\text{Total Conversion Rate} = \text{DIVIDE} ([\text{Total Conversions}], [\text{Total Clicks}], 0)$	Conversion rate from clicks to conversions.
Average CTR	$\text{Average CTR} = \text{AVERAGE} (\text{Sales}[\text{CTR}])$	Average CTR across the underlying rows.
Engagement Rate	$\text{Engagement Rate} = \text{DIVIDE} (\text{SUM} (\text{Sales}[\text{Engagement}]), \text{SUM} (\text{Sales}[\text{Reach}]), 0)$	Engagement relative to reach; use the source engagement metric.

3. Meta / Ad Set Measures

Measure	DAX / Logic	Purpose
Ad Set CTR	$\text{Ad Set CTR} = \text{DIVIDE} (\text{SUM} (\text{MetaAds}[\text{Clicks}]), \text{SUM} (\text{MetaAds}[\text{Impressions}]), 0)$	CTR at ad-set level.
Frequency	$\text{Frequency} = \text{DIVIDE} (\text{SUM} (\text{MetaAds}[\text{Impressions}]), \text{SUM} (\text{MetaAds}[\text{Reach}]), 0)$	Average number of times an audience is exposed.
Total Creatives	$\text{Total Creatives} = \text{DISTINCTCOUNT} (\text{MetaAds}[\text{Creative ID}])$	Unique creatives used in the Meta data.
Meta Ad sets	$\text{Meta Ad sets} = \text{DISTINCTCOUNT} (\text{MetaAds}[\text{Ad Set}])$	Unique Meta ad sets.

4. Growth & Budget Allocation Measures

Measure	DAX / Logic	Purpose
Growth Target %	$\text{Growth Target \%} = 0.25$	25% growth scenario used on the growth-planning model.
Current Plan Sales	$\text{Current Plan Sales} = [\text{Total Sales}]$	Baseline sales for the current plan.
Proposed Plan Sales	$\text{Proposed Plan Sales} = [\text{Current Plan Sales}] * (1 + [\text{Growth Target \%}])$	Sales target under the 25% growth scenario.

Measure	DAX / Logic	Purpose
Proposed Platforms %	Proposed Platforms % = SUM ('Proposed Allocation'[Proposed %])	Proposed platform allocation from the allocation table
Current Platform Spend %	Current Platform Spend % = SUM ('Proposed Allocation'[Current %])	Current allocation percentage from the allocation table
Budget Allocation Change %	Budget Allocation Change % = [Proposed Platforms %] - [Current Platform Spend %]	Change between proposed and current allocation.

5. Calculated Field / Classification Logic

Campaign Performance

SWITCH (TRUE(), [ROAS] >= 4, "High", [ROAS] >= 2, "Medium", "Low")

Performance classification for campaign/ad-set analysis.

Campaign Status

IF ([Campaign Performance] = "High", "Scale", "Review")

Status label supporting campaign review.

Creative Status

IF ([Total CTR] >= [Average CTR], "Strong", "Review")

Simple creative-performance classification.

Implementation Note

The uploaded PBIX report layout exposes the measure names used by the visuals (including Total Ad Spent, Total Sales, ROAS, Total CTR, Total CPC, Total CPM, Total Conversion Rate, Growth Target %, Current Platform Spend %, Proposed Platforms %, Current Plan Sales and Proposed Plan Sales). The PBIX package does not expose the original DAX expression text in a directly readable form here, so the formulas above document the metric logic represented by the dashboard rather than claiming to be byte-for-byte copies of the original authoring expressions.

Before final submission, if your evaluator expects the exact DAX typed in Power BI Desktop, open Modeling → Measures in the PBIX and compare these formulas with your actual expressions.
