

Marketing Analytics – Short Analysis & Recommendations

Growify Digital | Analysis period: 01 March 2026 – 31 July 2026

1. Executive Summary

The dashboard reports **₹6,268,371.82** in total advertising spend and **₹23,002,774.39** in sales, with a reported **3.67x ROAS**. It also records **1,534** orders and approximately **1,000** conversions. Overall, the report indicates positive marketing efficiency, while also highlighting opportunities to improve budget allocation and funnel conversion before increasing total spend.

KPI	Value
Total Ad Spend	₹6,268,371.82 (≈ ₹62.68 lakh)
Total Sales	₹23,002,774.39 (≈ ₹2.30 crore)
ROAS	3.67x
Orders	1,534
Conversions	≈ 1,000
Reach	≈ 40 million
Clicks	2,500,082
CTR / CPC / CPM	12.6% / ₹5.0 / ₹316.9
Engagement Rate	6.3%
Conversion Rate	0.1%

2. Key Performance Observations

- **Geographic performance:** India is identified as the highest-sales country in the dashboard.
- **Scale and traffic:** The report shows about 40M reach and 2.5M clicks, with 6.3% engagement, ₹5.0 CPC and 12.6% CTR.
- **Campaign structure:** The account contains 32 campaigns, 74 ad sets and 173 creatives. The dashboard notes that some ad sets deliver strong results at lower spend and that video creatives show stronger audience interaction.
- **Objective-level performance:** Different campaign objectives show different performance. The dashboard recommends monitoring higher-spend objectives more closely and using objective-level results for budget optimization.
- **Funnel:** The report recommends identifying the largest drop-off between clicks, add-to-cart and purchases, then improving the weakest conversion stage before increasing overall spend.

3. Budget Allocation & Growth Recommendation

The dashboard's proposed platform allocation is **70% Meta and 30% Google**, with the stated approach of reallocating the existing budget rather than increasing the overall budget. This should be validated against platform-level ROAS and conversion rates before implementation.

Recommended actions: (1) shift existing spend toward higher-efficiency platforms/campaigns identified in the dashboard; (2) reduce or limit spend on high-cost, lower-return campaigns after checking conversion quality; (3) scale strong ad sets and video creatives; and (4) monitor ROAS, CTR, CPC, CPM and conversion rate weekly.

4. 25% Sales-Growth Scenario

Using the dashboard's current sales of ₹23,002,774.39 as the baseline, a 25% growth target corresponds to approximately **₹28,753,467.99** in sales. The additional sales required would be about **₹5,750,693.60** (≈ ₹57.51 lakh).

If total ad spend were held constant at ₹6,268,371.82, the implied ROAS required to reach that sales target would be approximately **4.59x**, compared with the current reported 3.67x. This is a mathematical same-budget scenario, not a forecast.

5. Client-Facing Conclusion

The dashboard shows a marketing program generating ₹2.30 crore in sales from ₹62.68 lakh of ad spend at 3.67x ROAS. The next focus should be efficiency: identify the strongest platform, campaign, ad set and funnel stage; reallocate existing budget accordingly; and improve the weakest conversion stage. The 25% growth objective can then be tracked through a clear weekly KPI framework rather than increasing total spend immediately.

Note: Figures above are taken from the uploaded Power BI assignment. Rounded dashboard KPIs are retained as reported; the 25% target and implied ROAS are calculated from the reported baseline.
