

Supporting DAX Measures / Calculated Fields

Growify Digital – Marketing Analytics | Extracted from the submitted Power BI report

This document lists the measures actually referenced by the six report pages in the submitted PBIX. It also records the model tables shown in the relationship diagram and where each measure is used.

1. Power BI Model Tables

The relationship diagram in the submitted PBIX shows these model tables: Sales, GoogleAds, MetaAds, DimDate, DimCountry, Platform, Campaign, Ad Set, Funnel Stage, Proposed Allocation.

2. Measures Used Across All Six Report Pages

1. Performace And Marketing Analysis

Measure	Purpose / use
ROAS	Return on Ad Spend; used to evaluate sales generated relative to advertising spend.
Total Ad Spent	Aggregates advertising spend for the selected filter context.
Total Conversions	Aggregates conversions for the selected filter context.
Total Orders	Aggregates orders for the selected filter context.
Total Sales	Aggregates sales/revenue for the selected filter context.

2. Campaign & Ad Set Performance

Measure	Purpose / use
Average CTR	Average click-through rate used for campaign/ad-set performance comparison.
Campaign Performance	Performance classification/measure used to distinguish campaign performance in the report.
Meta Ad sets	Counts/identifies Meta ad sets used in the campaign/ad-set analysis.
ROAS	Return on Ad Spend; used to evaluate sales generated relative to advertising spend.
Total Ad Spent	Aggregates advertising spend for the selected filter context.
Total CTR	Overall click-through rate used across performance and funnel visuals.
Total Campaign	Counts campaigns used in the report.
Total Creatives	Counts creatives used in the report.
Total Orders	Aggregates orders for the selected filter context.
Total Sales	Aggregates sales/revenue for the selected filter context.

3. Audience Analysis

Measure	Purpose / use
Engagement Rate	Measures engagement relative to the relevant audience/traffic volume.
ROAS	Return on Ad Spend; used to evaluate sales generated relative to advertising spend.
Total Ad Spent	Aggregates advertising spend for the selected filter context.
Total CPC	Cost per click for evaluating traffic acquisition efficiency.
Total CTR	Overall click-through rate used across performance and funnel visuals.
Total Campaign	Counts campaigns used in the report.
Total Clicks	Aggregates clicks.

Measure	Purpose / use
Total Impressions	Aggregates impressions.
Total Sales	Aggregates sales/revenue for the selected filter context.

4. Ad Set & Ad Deep Dive

Measure	Purpose / use
Ad Set CTR	Click-through rate at the ad-set level.
Add to Cart	Aggregates add-to-cart events for funnel analysis.
Creative Status	Creative classification/status used in the ad deep-dive.
Frequency	Measures average ad exposure/frequency in the relevant context.
Total CPC	Cost per click for evaluating traffic acquisition efficiency.
Total CPM	Cost per thousand impressions.
Total CTR	Overall click-through rate used across performance and funnel visuals.
Total Clicks	Aggregates clicks.
Total Conversions	Aggregates conversions for the selected filter context.
Total Creatives	Counts creatives used in the report.
Total Purchases	Aggregates purchases for funnel conversion analysis.

5. Funnel & Efficiency

Measure	Purpose / use
Add to Cart	Aggregates add-to-cart events for funnel analysis.
Total CPC	Cost per click for evaluating traffic acquisition efficiency.
Total CPM	Cost per thousand impressions.
Total CTR	Overall click-through rate used across performance and funnel visuals.
Total Clicks	Aggregates clicks.
Total Conversion Rate	Measures conversions relative to the relevant traffic/impression base used by the report.
Total Impressions	Aggregates impressions.
Total Purchases	Aggregates purchases for funnel conversion analysis.

6. Budget Reallocation & Growth Plan

Measure	Purpose / use
Budget Allocation Change %	Measures the change between current and proposed platform allocation.
Current Plan Sales	Sales value associated with the current plan in the growth scenario.
Current Platform Spend %	Current platform-level spend allocation percentage.
Growth Target %	Growth target used in the growth scenario.
Proposed Plan Sales	Sales value associated with the proposed growth/reallocation plan.
Proposed Platforms %	Proposed platform allocation percentage.

3. DAX / Calculated-Field Logic Reference

The PBIX report layout exposes the measure names and their usage in visuals, but it does not expose the original measure-expression text in a directly readable form. Therefore, the formulas below are provided as documentation of the metric logic implied by the measure names and report usage; they are not claimed to be byte-for-byte copies of the original DAX stored in the model.

Measure	Documented DAX / calculation logic
ROAS	DIVIDE([Total Sales], [Total Ad Spent])
Total Ad Spent	SUM of the advertising-spend field(s) in the model.
Total Conversions	SUM of the conversion field.
Total Orders	SUM of the orders field.
Total Sales	SUM of the sales/revenue field.
Average CTR	AVERAGE of the CTR field.
Campaign Performance	Performance logic/classification used by the Campaign visual.
Meta Ad sets	COUNT/COUNTROWS of the relevant Meta ad-set records.
Total CTR	DIVIDE([Total Clicks], [Total Impressions])
Total Campaign	COUNT/COUNTROWS of the campaign records.
Total Creatives	COUNT/COUNTROWS of the creative records.
Engagement Rate	Engagement measure used by the Audience Analysis page.
Total CPC	DIVIDE([Total Ad Spent], [Total Clicks])
Total Clicks	SUM of the clicks field.
Total Impressions	SUM of the impressions field.
Ad Set CTR	CTR calculated at ad-set level using clicks and impressions.
Add to Cart	SUM of the add-to-cart field.
Creative Status	Status/classification logic used by the Creative Status visual.
Frequency	Impressions/reach exposure measure used by the ad-set deep dive.
Total CPM	DIVIDE([Total Ad Spent], [Total Impressions]) * 1000
Total Purchases	SUM of the purchases field.
Total Conversion Rate	Conversion-rate calculation used by the Funnel & Efficiency page.
Budget Allocation Change %	Proposed platform allocation minus current platform allocation.
Current Plan Sales	Sales calculation for the current plan in the growth scenario.
Current Platform Spend %	Current platform spend divided by total/current spend.
Growth Target %	Growth target measure used in the 25% growth scenario.
Proposed Plan Sales	Sales calculation for the proposed plan/growth scenario.
Proposed Platforms %	Proposed allocation percentage by platform.

4. Measure Count

The six report pages reference **28 unique measures**. Some measures are reused across multiple pages, which is why the total number of measure references is higher.
